Wrap-up
Questions

Challenges

Security

Ensuring the security of sensitive information

Integration

Identity needs to flow through connected systems

User Experience

Balancing security with user experience

Complexity

Different types of authentication methods (MFA) and authorization rules

Evolving Threats

The threat landscape is constantly evolving, new security vulnerabilities are discovered

What is Azure AD B2C?

FREE! *

Identity management platform (IDP)

- › Managing and authenticating (external) user identities
- › (Almost) OAuth2 and OIDC compliant
- › Support for multi-factor authentication

Secure and Scalable

- › Handle large number of users
- › Highly available
- › Azure platform security
- › Up-to-date with new security features, patches and improvements

Customizable

- › Customizable 'standard' UserFlows
- › Fully customizable policies
- › Theme it to your own brand
- › Integrate with Social identity providers

What is MSAL?

Microsoft Authentication Library

- › Client library
- › Acquire, cache & renew security tokens from Microsoft identity platform
- › Azure AD B2C
- › Supports several user flows
- › Interactive and non-interactive authentication
- › Available for several platforms, incl .NET MAUI

Demystifying Authentication for .NET MAUI Apps and APIs with Azure B2C: It's Easier Than You Think

Evolving Threats

Demystifying Authentication for .NET MAUI Apps and APIs with Azure B2C: It's Easier Than You Think

Demo

Azure AD B2C & MSAL

What about Android & iOS?

Additional platform-specific setup/plumbing is needed

Usage of the MSAL code doesn't change!

Code can be found on the **GitHub repository** of this talk

    "given_name": "Pieter Nijs",
    ...
  }
}
```

Demo Authorization

Wrapping up...

Don't roll your own security

- › Authentication and authorization is challenging, trust on established components
- › Azure AD B2C is ideal when targeting users outside an organization
- › AD B2C is customizable (policies, branding, ...)

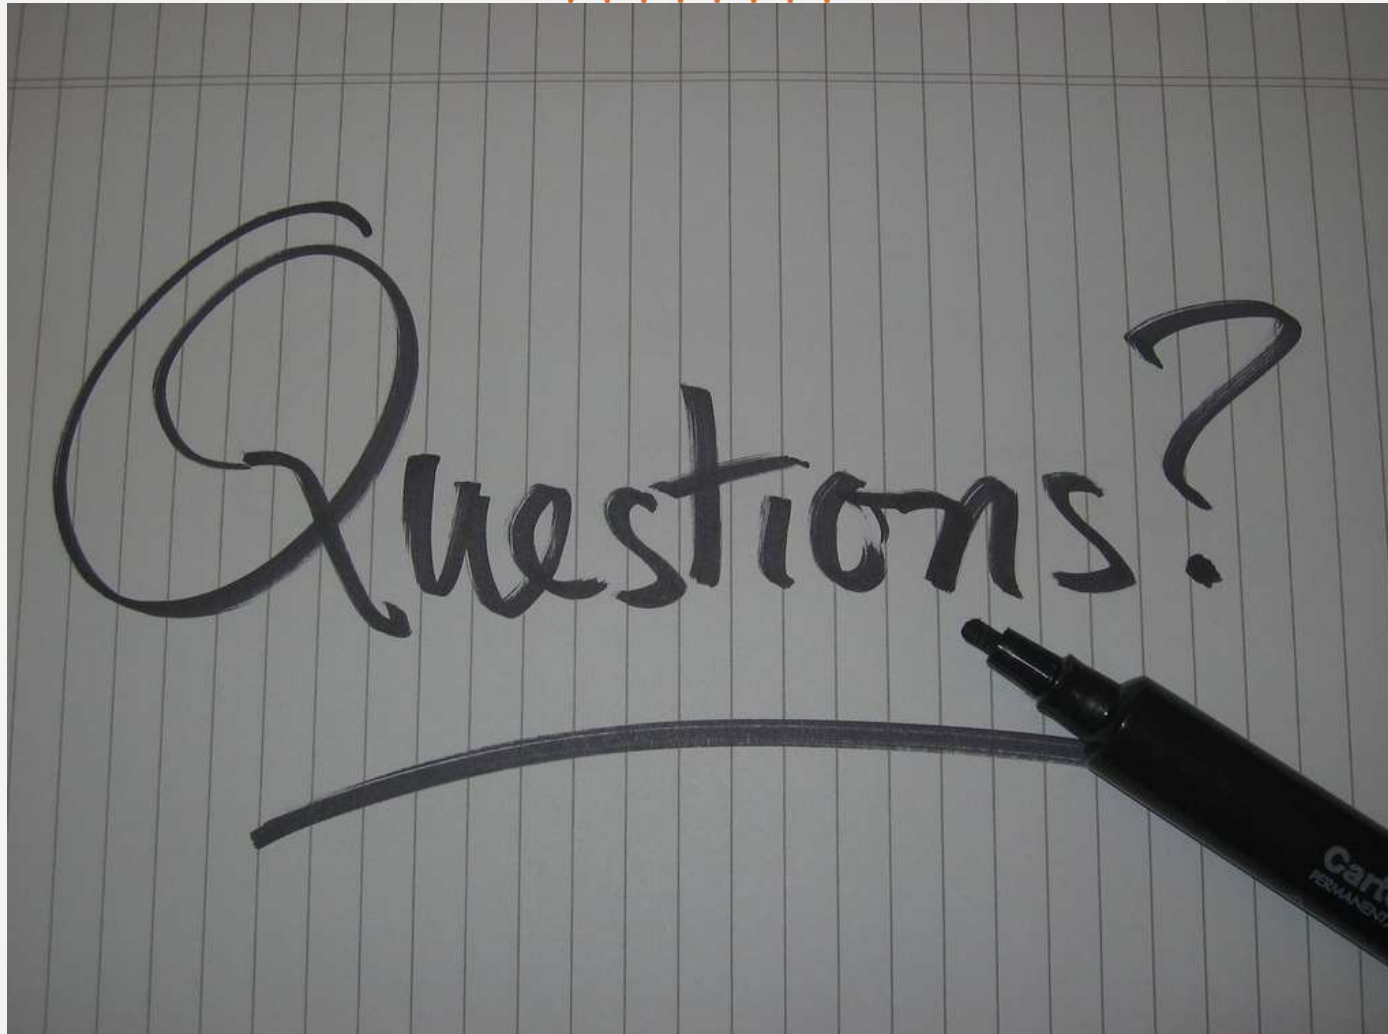

MSAL makes token management a breeze

- › Acquire, cache and renew tokens easily
- › Cross platform support, some platform specific config or code is needed
- › Helps in creating good User Experience

Separate authorization and authentication

- › Provides great flexibility
- › Promotes reusability
- › Better maintainability
- › Allows for more loosely couple integration

Thank you!
